

Service: Technology Management

Introduction

As a full-service IT consulting firm, **Network Integration Services (NIS)** delivers integration-based IT services to enhance network performance and optimize the return on network and integration investments. NIS designs and builds information technology solutions that effectively streamline network applications and business processes.

NIS provides a stable environment, utilizing high-performance technology and monitoring systems to ensure availability, security and manageability. NIS incorporates mobility and flexibility into existing systems and applications by providing integration-based capabilities for wireline and wireless design and delivery.

Featured Services

IT Infrastructure

NIS employs certified engineers with a wide range of experience to develop, customize and migrate IT solutions. In partnership with Hewlett Packard, IBM, Cisco and EMC, NIS provides leading-edge service-level management.

As an outsourcing service to augment existing IT departments or as the strategic developer of individual projects, NIS delivers integration-based IT management services. NIS has deep experience helping companies create IT departments from scratch, or assisting CIOs and IT executives in turning a good environment into a center of excellence.

Tools/Devices

NIS can provide personnel, equipment and services required to resource and develop innovative solutions. This includes management, network engineers, system administrators, networking equipment, servers and network connectivity. NIS partners with a superior list of preferred partners, including Cisco, EMC and HP. HP Openview provides a distributed, large-scale management solution that controls and reports on the performance of the IT environment.

Project Management

NIS provides comprehensive project management of architecture deployment, collaborating with clients to assess the current IT environment and to help design and implement best practices in project lifecycle management. A customized evaluation identifies where the environment is meeting company needs and where technology improvements are needed. NIS assists clients in prioritizing integration investment options and building a roadmap tied to strategic objectives.

Business Benefits

- Extensive experience in delivering IT solutions
- Support of business strategy
- Improved performance and uptime
- Integration-based initiatives
- Reduced cost and enhanced return on investment
- A flexible IT environment
